Dynamic Equity Fund - Monthly Commentary

November 2018 Commentary – LoCorr Dynamic Equity Fund

Market Commentary

The S&P 500 TR Index notched a positive month in November, rebounding off of October's struggle. Despite challenges early in the month, the S&P 500 TR Index closed strong, boosting YTD performance to +5.11%. Progress on the U.S. and China trade front, along with dovish comments from the Fed, helped to bolster the market as investor sentiment seemed to improve late in November. While the Fed's comments were viewed positively by equity investors, some remain cautious as trade issues and slowing U.S. growth in 2019 may keep volatility elevated heading into the end of the year.

Portfolio Update

The LoCorr Dynamic Equity Fund Class I share (the Fund)

posted a positive November, up +1.54%, falling just short of the +2.04% posted by the S&P 500 TR Index. During the month, Kettle Hill finished in the red, which was offset by strong contributions from Billings Capital. Net exposure for the Fund closed at 62%, down slightly from 64% at the end of last month.

The Fund benefited from positive contributions in its long book, with primary contributions from stocks in the Consumer Cyclical sector, followed by the Industrials, Technology, and the Real Estate sectors, all of which were additive to the Fund. Within the Consumer Cyclical sector, the Fund saw strong performance from a supplier and distributor of automotive products, along with positive performance from an emergency

Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 888.628.2887. Investment performance reflects fee waivers in effect. In the absence of such waivers, total return would be reduced. Performance data shown with load for Class A shares reflects a 5.75% sales load and for Class C shares reflects a 1.00% CDSC. Performance data shown without the load does not reflect the current maximum sales charges for Class A shares (up to 5.75% front-end) and Class C shares (1.00% CDSC). Had the sales charge or CDSC been included, the Fund's returns would be lower. The Fund's gross expense ratio is 2.51% for Class A; 3.26% for Class C; and 2.26% for Class I.

¹The Fund commenced operations on May 10, 2013.

Commentary continued.

vehicles manufacturer; both positions benefited from strong industry tailwinds as the U.S. / China trade war tension lessened in November. In the Industrial sector, a position in an airline company moved higher on lower costs, as oil prices decreased throughout the month. Lastly, within the Technology sector, a position in a company that provides connectivity and networks for consumer and businesses ticked higher on strong growth within their broadband coverage and partnerships. The Financial Services sector was the largest detractor during the month, with negative performance from a consumer financial services company, whose loss of a major partnership and technology platform updates have concerned the street.

The Fund experienced nominal losses from its short book in November. With consideration to the upward movement of the equity markets, the majority of the sectors in the short book finished in the red. A holding in the Technology sector bucked this trend, as a company which designs and manufactures mobile communication and media devices struggled (benefitting the

short position) as global trade issues continued to impact the stock. Losses from positions in the Consumer Cyclical, Industrials, and Technology sectors were the largest overall detractors.

Outlook

We continue to believe the Fund is well positioned with two highly complementary investment managers employing distinct yet complementary investment strategies. Kettle Hill uses an opportunistic investment approach and focuses primarily on the small cap market. Its portfolio is expected to be defensive and normally has low market exposure. Billings employs a more concentrated portfolio and invests across the market capitalization spectrum. Billings adheres to a long-term investment approach while typically having high net exposure to the market.

As of the most recent prospectus the Fund's total annual fund operating expenses after fee waiver is 2.51% for Class A; 3.26% for Class C; and 2.26% for Class I; and were applicable to investors. The Fund's expense cap (exclusive of any Rule 12b-1 distribution and/or servicing fees, taxes, interest, brokerage commissions, expenses incurred in connection with any merger or reorganization, indirect expenses, short selling expenses, expenses of other investment companies in which the Fund may invest, or extraordinary expenses such as litigation and inclusive of organizational cost incurred prior to the commencement of operations) is 1.99% for all share classes, net of contractual fee waiver through April 30, 2020.

S&P 500 Total Return Index is a capitalization weighted unmanaged benchmark index that includes the stocks of 500 large capitalization companies in major industries. This total return index includes net dividends and is calculated by adding an indexed dividend return to the index price change for a given period. **Morningstar Long/Short Equity Category** is an average monthly return of all funds in the Morningstar Long-Short Equity Category. The category contains a universe of funds with similar investment objectives and investment style, as defined by Morningstar. Performance of the indices and Morningstar Category Average is generated on the first business day of the month. **Russell 2000 Index** measures the performance of approximately 2,000 small-cap companies in the Russell 3000 Index, which is made up of 3,000 of the biggest U.S. stocks. The Russell 2000 serves as a benchmark for small-cap stocks in the United States. One cannot invest directly in an index. Opinions expressed are subject to change at any time, are not guaranteed and should not be considered investment advice.

The Fund's investment objectives, risks, charges and expenses must be considered carefully before investing. The prospectus contains this and other important information about the Fund and may be obtained by calling 952.513.8195 or by visiting www.LoCorrFunds.com. Read carefully before investing.

Mutual fund investing involves risk. Principal loss is possible. The Fund is non-diversified, meaning it may concentrate its assets in fewer individual holdings than a diversified fund. Therefore, the Fund is more exposed to individual stock volatility than a diversified fund. The Fund invests in foreign investments and foreign currencies which involve political, economic and currency risks, greater volatility and differences in accounting methods. This risk is increased for emerging markets. The Fund may make short sales of securities, which involves the risk that losses may exceed the original amount invested. The Fund may invest in illiquid securities which involve the risk that the securities will not be able to be sold at the time or prices desired by the fund, particularly during times of market turmoil. Investments in Real Estate Investment Trusts (REITs) involve additional risks such as declines in the value of real estate and increased susceptibility to adverse economic or regulatory developments. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer term debt securities. Investing in ETFs are subject to additional risks that do not apply to conventional mutual funds, including the risks that the market price of the shares may trade at a discount to its net asset value ("NAV"), an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which they trade, which may impact a Funds ability to sell its shares. The Fund can invest in small- and medium-capitalization companies, which tend to have limited liquidity and greater price volatility than large-capitalization companies. Investment by the Fund in lower-rated and non-rated securities presents a greater risk of loss to principal and interest than higher-rated securities.
