

The Benefits of a Sleeve of Low-Correlating Strategies

By blending low-correlating strategies into a sleeve, a portfolio can potentially deliver a more consistent return stream, while also providing a smoother ride across multiple market environments. As the chart below shows, a sleeve of low-correlating strategies can offer participation on the upside and risk mitigation on the downside when compared with the traditional 60/40 portfolio of stocks and bonds.

Upside/Downside Capture Ratio - June 1, 2013 - December 31, 2022

Returns are annualized for periods greater than one year. Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 888.628.2887. Investment performance reflects fee waivers in effect. In the absence of such waivers, total return would be reduced.

Source: Morningstar. Calculated using monthly data. The 60/40 Portfolio represents a 60% allocation to the S&P 500 Index and a 40% allocation to the Bloomberg U.S. Aggregate Bond Index, rebalanced monthly. The Low-Correlating Sleeve is equally weighted between LoCorr Macro Strategies Fund (LFMIX), LoCorr Long/Short Commodities Strategy Fund (LCSIX), and LoCorr Dynamic Opportunity Fund (LEQIX), rebalanced monthly. **Past performance is not a guarantee of future results.**

Key Takeaways

- An allocation to a sleeve of low-correlating strategies can lower portfolio risk.
- A sleeve of low-correlating strategies can offer participation on the upside and risk mitigation on the downside compared to a traditional 60/40 portfolio of stocks and bonds.
- Sleeves can be built to serve different purposes in a portfolio including buffering against rising interest rates or inflation and/or participating in rising equity markets

Performance as of 12/31/22, LoCorr Macro Strategies Fund - I Share: 15.40% 1-Year, 5.49% 5-Year, 3.12% since inception (3/24/2011); LoCorr Long/Short Commodities Strategy Fund - I Share: 6.06% 1-Year, 7.75% 5-Year, 5.13% since inception (12/30/2011); LoCorr Dynamic Opportunity Fund - I Share: -8.80% 1-Year, 1.56% 5-Year, 3.20% since inception (5/10/2013); Gross expense ratios; LFMIX 1.90%, LCSIX 2.22%, LEQIX 3.66%. Index performance as of 12/31/22, S&P 500 Index: -18.11% 1-Year, 9.42% 5-Year, 12.56% 10-Year; Bloomberg US Aggregate Bond Index: -13.01% 1-Year, 0.02% 5-Year, 1.06% 10-Year.

Bloomberg Capital U.S. Aggregate Bond Index is the most common index used to track the performance of investment grade bonds in the United States. **S&P 500 Total Return Index** is an index of 500 large capitalization companies in major industries. This total return index includes net dividends and is calculated by adding an indexed dividend return to the index price change for a given time period. Fees and/or transaction costs are not reflected. **Correlation** measures how much the returns of two investments move together over time. **Upside Capture Ratio** compares the portfolio's performance against the S&P 500 during periods when the S&P 500 performance was positive. **Downside Capture Ratio** compares the portfolio's performance against the S&P 500 during periods when the S&P 500 performance was negative. **Diversification does not assure a profit or protect against loss in a declining market.**

The Funds' investment objectives, risks, charges, and expenses must be considered carefully before investing. The prospectus contains this and other important information about the investment company, and it may be obtained by calling 1.855.LCFUNDS, or visiting www.LoCorrFunds.com. Read it carefully before investing.

Mutual fund investing involves risk. Principal loss is possible. Non-diversified investments may concentrate assets in fewer individual holdings than diversified investments. Therefore, the investments are more exposed to individual stock volatility than diversified funds. The Funds invest in foreign investments and foreign currencies which involve greater volatility and political, economic and currency risks and differences in accounting methods. These risks are greater for emerging markets. The Funds may make short sales of securities, which involves the risk that losses may exceed the original amount invested. Investing in commodities may subject the Funds to greater risks and volatility as commodity prices may be influenced by a variety of factors including unfavorable weather, environmental factors, and changes in government regulations. The Funds may invest in derivative securities, which derive their performance from the performance of an underlying asset, index, interest rate or currency exchange rate. Derivatives can be volatile and involve various types and degrees of risks, and, depending upon the characteristics of a

particular derivative, suddenly can become illiquid. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in Asset-Backed, Mortgage-Backed, and Collateralized Mortgage-Backed Securities include additional risks that investors should be aware of such as credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Investments in small- and medium-capitalization companies involve additional risks such as limited liquidity and greater volatility. Investments in lower-rated and non-rated securities present a greater risk of loss to principal and interest than higher-rated securities. ETF investments are subject to investment advisory and other expenses, which will be indirectly paid by the Funds. As a result, the cost of investing in the Funds will be higher than the cost of investing directly in ETFs and may be higher than other mutual funds that invest directly in stocks and bonds. ETFs are subject to specific risks, depending on the nature of the ETF. A Fund's real estate portfolio may be significantly impacted by the performance of the real estate market generally, and the Fund may be exposed to greater risk and experience higher volatility than would a more economically diversified portfolio. Property values may fall due to increasing vacancies or declining rents resulting from economic, legal, cultural, or technological developments. Investments in Limited Partnerships (including master limited partnerships) involve risks different from those of investing in common stock including risks related to limited control and limited rights to vote on matters affecting the Limited Partnership, risks related to potential conflicts of interest between the Limited Partnership and the Limited Partnership's general partner, cash flow risks, tax risk, dilution risks and risks related to the general partner's limited call right. Underlying Funds are subject to management and other expenses, which will be indirectly paid by the Fund. Investments in Real Estate Investment Trusts (REITs) involve additional risks such as declines in the value of real estate and increased susceptibility to adverse economic or regulatory developments. Past performance is not a guarantee of future results. Diversification does not assure a profit nor protect against loss in a declining market.
