Rebuild the 60/40 with Low-Correlating Solutions

Given the wide range of economic uncertainties, including existing pressure on growth and inflation, investors should consider a more diversified asset allocation than 60/40. As shown in the chart below, a 60/20/20 portfolio has historically outperformed a 60/40 portfolio over the last four decades, while frequently providing higher risk-adjusted returns (as measured by Sharpe Ratio).

1980's	Return	Sharpe	1990's	Return	Sharpe	2000's	Return	Sharpe	2010's	Return	Sharpe	Jan 2020-Dec 2023	Return	Sharpe
60 S&P 500 / 20 Bbg Agg / 20 CISDM CTA	19.3%	0.8	60 S&P 500 / 20 Bbg Agg / 20 CISDM CTA	14.6%	1.1	60 S&P 500 / 20 Bbg Agg / 20 CISDM CTA	2.7%	0.0	60 S&P 500 / 20 Bbg Agg / 20 CISDM CTA	9.9%	1.2	60 S&P 500 / 20 Bbg Agg / 20 CISDM CTA	9.0%	0.6
60 S&P / 40 Bbg Agg	15.9%	0.6	60 S&P / 40 Bbg Agg	14.1%	1.0	60 S&P / 40 Bbg Agg	2.3%	0.0	60 S&P / 40 Bbg Agg	9.8%	1.2	60 S&P / 40 Bbg Agg	7.1%	0.4

Key Takeaways

- Poor diversification can have a meaningful impact on long-term results as growth can unexpectedly be down and inflation unexpectedly up for uncertain periods of time.
- A 60/20/20 portfolio seeks to provide a stable return stream and enhance diversification.
- A $100K allocation to a 60/20/20 portfolio in 1980 would today be worth $10M versus over $6M for a 60/40 allocation.

The performance of the index is shown for comparison purposes only. The securities and other instruments included in this index is not necessarily included in any LoCorr Fund portfolio and criteria for inclusion in the index is different than those for investment in any such portfolio. The performance of this index was obtained from published sources believed to be reliable, but which are not warranted as to accuracy or completeness. Unless noted otherwise, index returns do not reflect fees or transaction costs and reflect reinvestment of net dividends. Past performance is not a guarantee of future results.

Bloomberg Capital U.S. Aggregate Bond Index is the most common index used to track the performance of investment grade bonds in the United States. **S&P 500 Total Return Index** is an index of 500 large capitalization companies in major industries. This total return index includes net dividends and is calculated by adding an indexed dividend return to the index price change for a given time period. Fees and/or transaction costs are not reflected. **CISDM CTA Index** is designed to broadly represent the performance of all CTA programs in the Morningstar database that meet the inclusion requirements. **Sharpe Ratio** measures the amount by which a set of values differs from the arithmetical mean, equal to the square root of the mean of the differences' squares.

Bloomberg U.S. Aggregate Bond Index performance as of 12/31/23 is 5.53% 1-Yr, 1.10% 5-Yr, and 1.81% 10-Yr. S&P 500 Index performance as of 12/31/23 is 26.29% 1-Yr, 15.69% 5-Yr, and 12.03% 10-Yr. CISDM Index performance as of 12/31/23 is 0.88% 1-Yr, 9.36% 5-Yr, and 6.42% 10-Yr.

Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 952.513.8195.

Diversification does not assure a profit or protect against loss in a declining market.

The Funds' investment objectives, risks, charges, and expenses must be considered carefully before investing. The prospectus contains this and other important information about the investment company, and it may be obtained by calling 1.855.LCFUNDS, or visiting www.LoCorrFunds.com. Read it carefully before investing.

Mutual fund investing involves risk. Principal loss is possible. Non-diversified investments may concentrate assets in fewer individual holdings than diversified investments. Therefore, the investments are more exposed to individual stock volatility than diversified funds. The Funds invest in foreign investments and foreign currencies which involve greater volatility and political, economic and currency risks and differences in accounting methods. These risks are greater for emerging markets. The Funds may make short sales of securities, which involves the risk that losses may exceed the original amount invested. Investing in commodities may subject the Funds to greater risks and volatility as commodity prices may be influenced by a variety of factors including unfavorable weather, environmental factors, and changes in government regulations. The Funds may invest in derivative securities, which derive their performance from the performance of an underlying asset, index, interest rate or currency exchange rate. Derivatives can be volatile and involve various types and degrees of risks, and, depending upon the characteristics of a particular derivative, suddenly can become illiquid. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in Asset-Backed, Mortgage-Backed, and Collateralized Mortgage-Backed Securities include additional risks that investors should be aware of such as credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Investments in small- and medium-capitalization companies involve additional risks such as limited liquidity and greater volatility. Investments in lower-rated and non-rated securities present a greater risk of loss to principal and interest than higher-rated securities. ETF investments are subject to investment advisory and other expenses, which will be indirectly paid by the Funds. As a result, the cost of investing in the Funds will be higher than the cost of investing directly in ETFs and may be higher than other mutual funds that invest directly in stocks and bonds. ETFs are subject to specific risks, depending on the nature of the ETF. A Fund's real estate portfolio may be significantly impacted by the performance of the real estate market generally, and the Fund may be exposed to greater risk and experience higher volatility than would a more economically diversified portfolio. Property values may fall due to increasing vacancies or declining rents resulting from economic, legal, cultural, or technological developments. Investments in Limited Partnerships (including master limited partnerships) involve risks different from those of investing in common stock including risks related to limited control and limited rights to vote on matters affecting the Limited Partnership, risks related to potential conflicts of interest between the Limited Partnership and the Limited Partnership's general partner, cash flow risks, tax risk, dilution risks and risks related to the general partner's limited call right. Underlying Funds are subject to management and other expenses, which will be indirectly paid by the Fund. Investments in Real Estate Investment Trusts (REITs) involve additional risks such as declines in the value of real estate and increased susceptibility to adverse economic or regulatory developments. Past performance is not a guarantee of future results. Diversification does not assure a profit nor protect against loss in a declining market.
