

HEDGED GROWTH SLEEVE | APRIL 2025

April 2025 Overview from LoCorr Funds Research

Equities continued to fall in April as the S&P 500 Index fell -0.68%. The month was dominated by global trade policy uncertainty. The S&P 500 fell -12% in the subsequent three trading days following "Liberation Day", though it would come roaring back. The Bloomberg U.S. Aggregate Bond Index gained +0.39%. Commodities fell as OPEC+ announced plans to increase oil production, driving both WTI and Brent crude oil down more than -17%. The U.S. Dollar continued its rapid decline as investors weighed the impact of tariffs.

Hedged Growth Sleeve Highlights

The LoCorr **Hedged Growth** sleeve (*equal weighting of Macro Strategies, Long/Short Commodities Strategy, and Dynamic Opportunity Funds, rebalanced monthly*), was down in April. However, we believe this blend of complementary funds is well-positioned to deliver meaningful diversification and provide a portfolio inflation buffer as the underlying funds can participate in upward and downward trending markets. Further, this mix has historically exhibited low correlation to both stocks and bonds while aiming to act as a buffer during periods of extended equity market weakness to create a differentiated return stream for real portfolio diversification.

Low-Correlating Sleeve Allocation

The addition of a **low-correlating sleeve** provides the potential for a return stream independent of equities and fixed income and a more balanced portfolio. The **Hedged Growth Sleeve** has a long-term track record of delivering positive returns.

Performance Summary | As of April 30, 2025

							Since Common Inception ¹				As of March 31, 2025		
	Monthly	YTD	1-Year	3-Year	5-Year	10-Year	Since Inception	Correlation to BBg Agg	Correlation to S&P 500	Beta to S&P 500	1-Year	5-Year	10-Year
LoCorr Hedged Growth Sleeve (LFMIX 33 / LCSIX 33 / LEQIX 33)	-1.47%	-2.08%	-2.45%	-0.12%	4.32%	4.47%	4.81%	0.04	0.52	0.19	-0.76%	5.16%	4.44%

Help your clients further diversify their portfolios with a sleeve of alternative investments that seeks to provide:

- Low correlation to traditional investments
- Reduced risk in portfolios
- Profit in both up and down markets
- Enhanced returns
- A buffer against inflation

Each Funds investment objectives, risks, charges, and expenses must be considered carefully before investing. The summary and statutory prospectuses contain this and other important information about the investment company, and it may be obtained by calling 1.855.LCFUNDS, or visiting www.LoCorrFunds.com. Read it carefully before investing.

Mutual fund investing involves risk. Principal loss is possible. The Funds invests in foreign investments which involve greater volatility and political, economic and currency risks and differences in accounting methods. Investing in commodities may subject the Funds to greater risks and volatility as commodity prices may be influenced by a variety of factors including unfavorable weather, environmental factors, and changes in government regulations. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in Asset-Backed, Mortgage-Backed, and Collateralized Mortgage-Backed Securities include additional risks that investors should be aware of such as credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Derivative contracts ordinarily have leverage inherent in their terms which can magnify the Fund's potential for gains or losses through increased long and short position exposure. The Funds may access derivatives via a swap agreement. A risk of a swap agreement is the risk that the counterparty to the agreement will default on its obligation to pay the Funds. The Fund will incur a loss as a result of a short

position if the price of the short position instrument increases in value between the date of the short position sale and the date on which an offsetting position is purchased. Investments in lower-rated and nonrated securities presents a greater risk of loss to principal and interest than higher rated securities. Underlying Funds are subject to management and other expenses, which will be indirectly paid by the Fund. Small and mid-sized companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group.

Diversification does not assure a profit nor protect against loss in a declining market. Correlation measures how much the returns of two investments move together over time. Bloomberg U.S. Aggregate Bond Index is a broad-based bond index comprised of government, corporate, mortgage and asset-back issues rated investment grade or higher that have at least one year to maturity. This index includes net dividends. S&P 500 Total Return Index, is a stock market index tracking the stock performance of 500 large companies listed on stock exchanges in the United States. Beta measures the sensitivity of a stock's return relative to the return of a selected market index. When beta is greater than one, it means a stock will rise or fall more than the market.

The performance of various indices is shown for comparison purposes only. The performance of those indices was obtained from published sources believed to be reliable but which are not warranted as to accuracy or completeness. Unless noted otherwise, index returns do not reflect fees or transaction costs and reflect reinvestment of net dividends. One cannot invest directly into an index.
