

LoCorr Long/Short Commodities Strategy Fund

LCSAX | LCSCX | LCSIX

Fourth Quarter | December 31, 2022

Fund Objective

The Fund's primary investment objective is capital appreciation in rising and falling commodities markets, with managing volatility as a secondary objective.

The Fund seeks to provide:

- The ability to profit in both up and down commodities markets
- Low correlation to stocks and bonds
- A hedge against inflation

Fund Summary

The LoCorr Long/Short Commodities Strategy Fund is a multi-manager commodities strategy with the flexibility to take both long and short positions in global commodity markets.

Investment Adviser

LoCorr Fund Management is responsible for overseeing the Fund's investments as well as manager and sub-adviser selection, management and allocations.

Fund Facts

Total Net Assets: \$1.4 billion (as of 12/31/22)

Inception Date: January 1, 2012

Minimum Investment: Class A & C - \$2,500 initial; \$500 subsequent
Class I - \$100,000 initial; \$500 subsequent

Expense Ratios	Gross
Class A	2.47%
Class C	3.22%
Class I	2.22%

Expense cap: Class A 2.20%, Class C 2.95%, Class I 1.95%. The Fund's expense cap listed here includes the 12b-1 distribution and/or servicing fees per share class, but excludes taxes, interest, brokerage commissions, expenses incurred in connection with any merger or reorganization, indirect expenses, expenses of other investment companies in which the Fund may invest, or extraordinary expenses such as litigation and inclusive of organizational cost incurred prior to the commencement of operations will not exceed 1.95%/daily average net assets attributable to each class of the Fund, as stated above, net of contractual waiver through April 30, 2023. Gross expense ratios are as of a fund's most recent prospectus and were applicable to investors.

Calendar Year Returns | As of 12/31/22

	2022	2021	2020	2019	2018	2017	2016	2015	2014	2013	2012*
Class I - LCSIX	6.06%	14.82%	9.91%	-5.97%	15.40%	6.19%	-2.67%	22.61%	22.36%	-8.11%	-16.20%
ICE BofAML 3M T-Bill Index	1.49%	0.08%	0.74%	2.31%	1.94%	0.80%	0.34%	0.08%	0.04%	0.09%	0.10%

Returns are annualized for periods greater than one year. Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 888.628.2887. Investment performance reflects fee waivers in effect. In the absence of such waivers, total return would be reduced. Performance data shown with load for Class A shares reflects a 5.75% sales load and for Class C shares reflects a 1.00% CDSC. Performance data shown without the load does not reflect the current maximum sales charges for Class A shares (up to 5.75% front-end) and Class C shares (1.0% CDSC). Had the sales charge been included, the fund's returns would be lower. *January 1, 2012. Past Performance is not a guarantee of future results.

Seeking to build a Better Portfolio with Complementary Managers

At LoCorr Funds, we are focused on collaborating with great managers. Through innovative investment processes, strong investment selections, systematic buy and sell disciplines, targeted fundamental research, thorough market intelligence, and extensive industry experience, these managers help us seek to bring carefully crafted low-correlating products to market. We call that hiring “Real Managers with Real Track Records”.

ARCOM

- Firm inception 2014
- Discretionary natural gas strategy - typically trade relative value
- Portfolio Manager has traded commodities for more than 30+ years
- Rigorous modeling of production, weather, inventory levels, and demand to forecast future supply demand balance

Core Commodity

- Firm inception 2003 - Founders Absolute Return strategy launched 2017
- Discretionary approach beginning with the microeconomic analysis of each market based on four factors: Quantitative, fundamental, market dynamics, and the manager’s discretion to provide real time market assessments and risk management considerations
- The manager may hold directional long/short commodity and inter- and intra-commodity relative value positions across ~20 markets and individual natural resource equities

East X

- Firm inception 2017, strategy inception 2014
- Seeks diversified returns across global commodity markets, time frames, and market structures using systematic approach
- Adaptive technical signals provide a long or short view to which machine-learning predictive techniques are applied to determine conviction and risk for each position
- Pattern recognition is employed utilizing trend, counter trend, structure, and carry strategies
- Trades in about 30 global commodity markets

J E Moody

- Commodity program launched in 2006
- Employs a systematic relative value strategy taking positions in intra-market calendar spreads
- Typically has little directional commodity exposure regardless of market conditions
- Trades across 20+ commodity markets

Millburn

- Firm dates back to 1971, making it one of the most established systematic Commodity Trading Advisors
- Launched first commodity program in 2005
- Employs a systematic approach incorporating multi-factor directional and multi-factor calendar spread strategies
- Commodity exposure may be long, short, or neutral depending on market conditions
- Trades across 40+ commodity markets and commodity-oriented equity ETFs / futures

Systematica

- Firm inception in 2015
- Global commodity long/short program inception in 2010 at First Quadrant
- Directional long/short approach employing a multi-factor, quantitative model that incorporates price and non-price inputs
- No directional bias
- Capture behavior of commercial market participants (producers/consumers of commodities) who are the long-term drivers of commodity prices

Valent

- Firm inception in 2019 - Tatum Series strategy launched 2019
- Discretionary metals specialist that heavily utilizes both fundamental and quantitative research in the investment process
- The strategy ultimately takes positions in base and precious metals primarily via futures, though may utilize options, and trades a small number of OTC metals through forward contracts or similar with ~20 metals markets overall

Long/Short Commodities Strategy Fund

Exposure to experienced and complementary managers with different low-correlating investment styles to provide the potential for:

- Increased returns
- Low correlation to stocks and bonds
- Lower volatility
- A hedge against inflation

The fund's investment objectives, risks, charges, and expenses must be considered carefully before investing. The prospectus contains this and other important information about the investment company, and it may be obtained by calling 1.855.LCFUNDS, or visiting www.LoCorrFunds.com. Read it carefully before investing.

Mutual fund investing involves risk. Principal loss is possible. The Fund is non-diversified, meaning it may concentrate its assets in fewer individual holdings than a diversified fund. Therefore, the Fund is more exposed to an individual investment's volatility than a diversified fund. The Fund invests in foreign investments which involve greater volatility and political, economic and currency risks and differences in accounting methods. The Fund may make short sales of securities, which involves the risk that losses may exceed the original amount invested. Investing in commodities may subject the Fund to greater risks and volatility as commodity prices may be influenced by a variety of factors including unfavorable weather, environmental factors, and changes in government regulations. The Fund will incur a loss as a result of a short position if the price of the short position instrument increases in value between the date of the short position sale and the date on which an offsetting position is purchased. The Fund may invest in derivative securities, which derive their performance from the performance of an underlying asset or index. Derivatives can be volatile and involve various types and degrees of risks, and, depending upon the characteristics of a particular derivative, suddenly can become illiquid. Derivative contracts ordinarily have leverage inherent in their terms which can magnify the Fund's potential for gains or losses through increased long and short position exposure. The Fund may access derivatives via a swap agreement. A risk of a swap agreement is the risk that the counterparty to the agreement will default on its obligation to pay the Fund. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in Asset-Backed, Mortgage-Backed, and Collateralized Mortgage-Backed Securities include additional risks that investors should be aware of such as credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments.

S&P 500 Total Return Index is a capitalization weighted unmanaged benchmark index that includes the stocks of 500 large capitalization companies in major industries. This total return index includes net dividends and is calculated by adding an indexed dividend return to the index price change for a given period. ICE BofAML 3-Month T-Bill Index tracks the performance of the U.S. dollar denominated U.S. Treasury Bills publicly issued in the U.S. domestic market with a remaining term to final maturity of less than 3 months. S&P Goldman Sachs Commodity Index (GSCI) is a composite index of commodity sector returns which represents a broadly diversified, unleveraged,

long-only position in commodity futures. Performance as of 12/31/22 is 25.99% 1-Yr, 10.49% 5-Yr, -3.30% 10-Yr. **Barclays CTA Index** is an equal weighted index which attempts to measure the performance of the Commodity Trading Advisor (CTA) industry. The Index measures the combined performance of all CTAs reporting to Barclay Trading Group who have more than 4 years past performance. Fees and transaction costs are reflected. **Bloomberg U.S. Aggregate Bond Index** is a broad-based bond index comprised of government, corporate, mortgage and asset-back issues rated investment grade or higher that have at least one year to maturity. This index includes net dividends.

One cannot invest directly in an index. **Correlation** measures how much the returns of two investments move together over time. **Max drawdown** is an indicator of the risk of a portfolio chosen based on a certain strategy. It measures the largest single drop from peak to bottom in the value of a portfolio (before a new peak is achieved). **Standard Deviation** is the statistical measurement of dispersion about an average, which depicts how widely a portfolio's returns varied over a certain period of time. When a portfolio has a high standard deviation, the predicted range of performance is wide, implying greater volatility. **Sharpe Ratio** is the measures the amount by which a set of values differs from the arithmetical mean, equal to the square root of the mean of the differences' squares.

Diversification does not assure a profit nor protect against loss in a declining market.

Fund holdings and sector allocations are not yet funded, are subject to change and should not be considered a recommendation to buy or sell any security.

The Morningstar Rating™ for funds is calculated for managed products with at least a three-year history, without adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three- and five-year Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. The LoCorr Long/Short Commodities Strategy Fund was rated 4 stars among 68 Systematic Trend funds in the last 3 years, 5 stars among 62 Systematic Trend funds in the last 5 years, and 5 stars among 33 Systematic Trend funds in the last 10 years. The Morningstar Rating is for the Institutional share class only; other classes may have different performance characteristics.
