### WHAT WERE THE FUND COSTS FOR THE PAST YEAR? (based on a hypothetical \$10,000 investment)

| Class Name | Costs of a \$10,000 investment | Costs paid as a percentage of a \$10,000 investment |
|------------|--------------------------------|-----------------------------------------------------|
| Class C    | \$282                          | 2.82%                                               |

### HOW DID THE FUND PERFORM LAST YEAR AND WHAT AFFECTED ITS PERFORMANCE?

The Fund (C share class) finished the year up +0.11%, producing positive results in a volatile year for commodity markets. This result trailed the +3.76% return for the Morningstar Systematic Trend category, as the Fund’s allocation to unique strategies outside of trend following lagged in the second half of the year in what proved to be a strong environment for momentum-oriented approaches. Precious metals primarily drove gains, though industrial metals were also an area of profitability along with commodity-linked equities. Positions in energy, grains, and softs were detractors. Livestock trading was not a material driver of performance.
