

60/40 → 60/20/20

The **diversification benefits** from blending equity and fixed income investments disappear when they become positively correlated. Many investors are seeking other ways to diversify.

Low-correlating strategies typically do not move in the same ways as traditional stock and bond investments – and have the potential to profit when stocks or bonds are declining.

Portfolios need opportunities for **growth and diversification**. The time may be right to reconsider how those diversifying assets are allocated.

Stocks	Growth assets are often critical to help meet your clients' goals. But the risk involved in the equity market can potentially impede that vision. Diversifying assets are designed to offset that risk.
Bonds	Bonds have been the traditional diversifying asset class. They have historically performed differently than equities, providing some portfolio balance. However, bonds may no longer provide the diversification seen in the past, and may not be as beneficial of an investment as they have been traditionally.
Low-Correlating Assets	Low-correlating assets provide another layer of diversification. They can help add balance to a portfolio and seek to provide a smoother ride.

By considering the opportunities of low-correlating strategies, you can potentially achieve the diversification you need now and for the future.

Using this correlation chart, consider the effect that reducing exposure to the yellow zone, and increasing exposure in the green zone may have on the portfolios you manage. What is the effect?

Correlation Chart | July 1, 2014 - December 31, 2024

Annualized

Index/Fund	Vanguard 500	Vanguard Mid Cap	Vanguard Sm Cap	Vanguard FTSE	Vanguard Em Mkt	Vanguard Intl. Bond	Vanguard Bond Mkt	Vanguard ST Bond	LFMIX	LCSIX	LOTIX	Return	St. Dev.

Performance data quoted represents past performance; **past performance does not guarantee future results**. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 888.628.2887 for LoCorr Funds or 877.320.6390 for Vanguard Funds. Investment performance reflects contractual fee waivers in effect. In the absence of such waivers, total return would be reduced. Calculated using monthly returns.

Bond - 5/31/13, Total Bond Market - 9/18/95, Short-Term Bond - 9/27/11. Returns greater than one year are annualized.

Why LoCorr?

LoCorr Funds offers investments designed to be low-correlated to traditional investments such as stocks and bonds. As stocks and bonds can move in tandem impacting the effectiveness of traditional diversification approaches, we believe now is the time to consider adding low-correlating strategies that move differently than traditional asset classes. Our investment solutions are designed for investment professionals and individual investors who are seeking to achieve better diversification and the potential for reduced risk within their portfolios.

For use with institutional investors only, not for use with retail investors.

Vanguard 500 Index Fund seeks to track the performance of a benchmark index that measures the investment return of large-capitalization stocks. **Vanguard Mid-Cap Growth Index Fund** seeks to track the performance of a benchmark index that measures the investment return of mid-capitalization growth stocks. **Vanguard Small-Cap Growth Index Fund** seeks to track the performance of a benchmark index that measures the investment return of small-capitalization growth stocks. **Vanguard FTSE All-World ex-US Index Fund** seeks to track the performance of a benchmark index that measures the investment return of stocks of companies located in developed and emerging markets around the world. **Vanguard Emerging Markets Stock Index Fund** seeks to track the performance of a benchmark index that measures the investment return of stocks issued by companies located in emerging market countries. **Vanguard Total International Stock Index Fund** seeks to track the performance of a benchmark index that measures the investment return of stocks issued by companies located in developed and emerging markets, excluding the United States. **Vanguard Total Bond Market Index** is designed to provide broad exposure to U.S. investment-grade bonds. **Vanguard Short-Term Bond Index Fund** seeks to track the performance of a market-weighted bond index with a short-term dollar-weighted average maturity.

The Fund's investment objectives, risks, charges, and expenses must be considered carefully before investing. The prospectus contains this and other important information about the investment company, and it may be obtained by calling 1.855.LCFUNDS, or visiting www.LoCorrFunds.com for LoCorr Funds, or 877-320-6390 for Vanguard Funds. Read it carefully before investing.

Mutual fund investing involves risk. Principal loss is possible. The Fund is non-diversified, meaning it may concentrate its assets in fewer individual holdings than a diversified fund. Therefore, the Fund is more exposed to individual stock volatility than a diversified fund. The Fund invests in foreign investments and foreign currencies which involve greater volatility and political, economic and currency risks and differences in accounting methods. The Fund may make short sales of securities, which involves the risk that losses may exceed the original amount invested. Investing in commodities may subject the Fund to greater risks and volatility as commodity prices may be influenced by a variety of factors including unfavorable weather, environmental factors, and changes in government regulations. The Fund may invest in derivative securities, which derive their performance from the performance of an underlying asset, index, interest rate or currency exchange rate. Derivatives can be volatile and involve various types and degrees of risks, and, depending upon the characteristics of a particular derivative, suddenly can become illiquid. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer term debt securities. Investments in Asset-Backed, Mortgage-Backed, and Collateralized Mortgage-Backed Securities include additional risks that investors should be aware of such as credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Stocks, real estate, and bonds are not guaranteed. Bonds traditionally experience less volatility than stocks. Small-cap and mid-cap stocks involve additional risks such as limited liquidity and greater volatility than large-cap stocks. Real Estate investments concentrate their investments in the real estate industry and may involve greater risk and experience more volatility than other portfolios.

Diversification does not assure a profit nor protect against loss in a declining market.
